CMSC 104 Section 2
Fall 2026
Classwork #7

Manipulating Strings

In-class date: October 28, 2026
Due date: November 4, 2026

Assignment:

Part 1: .upper() and .lower()
Set a string variable to the following value:

```
New Orleans Saints football team
```

Print out this string in (a) upper case; (b) lower case; and (c) title case.

Part 2: Concatenation and repetition

Set two string variables; the first to the value
    Baltimore
And the second to the value
    Orioles

Print out: (a) the two variables concatenated so you get “BaltimoreOrioles” and (b) a string consisting of “Baltimore” printed 2 times concatenated with “Orioles” printed three times. In other words, it should be “BaltimoreBaltimoreOriolesOriolesOrioles”

Part 3: .split() and .join()

Set a string variable to the value

    University of California Golden Bears

(a) use .split() to create a list variable. Split on the blank spaces so that you get a list of the words in the string.
(b) insert the words “Los” and “Angeles” after “California” in the list, then change the word “Bears” to read “Bruins”
(c) use the .join() command to create a new string consisting of the words in your list. Ensure that there is one blank space between each word in the string.

Reminder

Assignments are your own effort. Do not share your code..

Grading Rubric

Part 1 - Uppercase, lowercase and title case print out correctly - 25 points
Part 2 - cocatenation and multiple strings print correctly - 25 points
Part 3 - the new string prints correction - 50 points

What to Submit

Your saved Python script.
